

The Orange Grove Digital Repository is a content management system serving all of Florida's educators across a variety of learning management systems. The Repository enables Florida educators to acquire, contribute, store, manage, and electronically share high-quality learning resources in one location. Users may also search multiple external sources with a single search query.

The Florida Distance Learning Consortium (FDLC) is pleased to announce that over 500 multimedia resources in a range of disciplines are now available to all Florida educators through The Orange Grove, Florida's K20 Digital Repository.

These resources, licensed from the **National Repository of Online Courses (NROC)**, support distance and classroom instruction in:

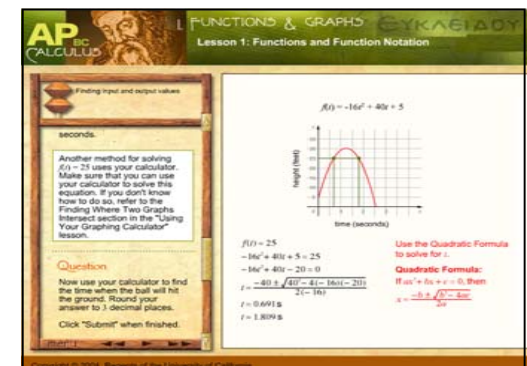

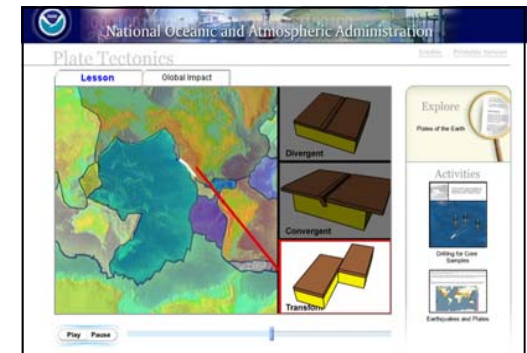

- Algebra
- Biology
- Calculus (English and Spanish versions)
- Environmental Science
- Physics
- American Government
- U.S. History
- Statistics

To increase the discoverability of these resources for Florida educators, faculty reviewers have added descriptive information to the resources, including the applicable Florida Statewide Course Numbers.

The NROC content, available in The Orange Grove, features rich, interactive and engaging multimedia resources including video, animation, still graphics, simulations, text and audio, problem sets, and assessments. These resources are brief, objective-based modules and are appropriate for both online and classroom use.

NROC materials are created by developers from leading academic institutions across the United States and peer reviewed by subject matter experts to ensure they meet high standards of scholarship, instructional value, and presentational impact.

All resources in The Orange Grove may be searched by subject area, keywords, Florida Statewide Course Numbers, and other user-defined fields.
